Your two-minute pitch

B. Cuthbert John | Helen and prospective funders | 12 November 2026

233 words. Rehearse at approximately 116 words per minute, with short pauses. Advance one slide every 20 seconds.

SLIDE 1 / 0:00-0:20

Imagine a commercial kitchen losing its cooking gas during service. The owner faces interruption. The distributor faces an urgent delivery. Caribbean Gas Intelligence proposes an earlier warning and a coordinated refill, beginning with commercial customers in Saint Lucia.

SLIDE 2 / 0:20-0:40

We will connect compatible cylinder sensors to equipment records and replenishment requests. Customers confirm the order. An established distributor delivers the gas. Our service combines local installation and support with a traceable record of what happened.

SLIDE 3 / 0:40-1:00

We will reuse the evidence workflows developed for GCFT. Government sales have not yet given us a dependable revenue path. This focused commercial application lets us test the technology against a paying customer’s operational need.

SLIDE 4 / 1:00-1:20

Our proposed pricing combines a monthly portfolio fee with a charge per asset. At the illustrative twenty-five-dollar asset price and six-dollar variable cost, contribution is nineteen dollars per asset monthly. We will test whether customers accept those terms.

SLIDE 5 / 1:20-1:40

We seek twenty thousand US dollars for staged validation: one paying partner, up to ten assets and ninety days. Funding releases follow customer and technical gates. We will measure data reliability, service cost and renewal willingness. Climate benefits will require measured evidence.

SLIDE 6 / 1:40-2:00

I bring more than thirty-five years of systems experience, supported by accounting and project-management expertise. I am seeking a lead validation sponsor and introductions to a distributor and technical partner. Will you help us secure those commitments and establish a credible path to expansion?

Investor breakout answers

Answer directly, then offer the supporting model. Separate evidence already available from evidence the pilot must produce.

Why would a distributor pay?

Our hypothesis is that better demand visibility and confirmed replenishment can improve delivery planning and retention. We will ask the buyer to quantify its problem and sign at a stated price. That value remains unproven.

Why can customers not use the sensor supplier’s app?

They can. CGI must justify its charge through local installation, distributor coordination, exception handling and reporting. If the existing app meets the need economically, we should partner or narrow our service.

Do you already have customers or live sensors?

This proposal does not establish secured contracts or deployed sensors. The first gate requires a paid agreement, site access and a technically workable data path. Describe any newer verified progress precisely.

Does US$20,000 fund expansion?

It funds the proposed 90-day validation ceiling. The illustrative growth scenario requires about US$34,856 total funding, including a US$3,000 reserve. Expansion starts only after the pilot gate and requires separate approval.

What investment return are you offering?

The preferred initial instrument is a staged grant or corporate pilot sponsorship. Equity valuation, investor rights and return expectations require separate diligence. No return is promised.

How strong is the climate case?

LPG monitoring alone does not prove lower emissions. We will measure delivery fuel and operating changes against a baseline. Carbon revenue remains zero in the base case. Cooling and biogas need separate technical and commercial gates.

What is the biggest risk?

A customer may not pay enough to cover installation and ongoing support. We will stop or redesign if the price, data path or delivery process fails. Unspent funding should remain subject to the agreement.

What should we agree today?

An owner for sponsor diligence, introductions to a distributor and qualified technical partner, and a review within 14 days. Confirm the contracting entity, platform IP rights, insurance and partner responsibilities before funds move.
